

MYKOLA MAKHOVYK

Senior QA Analyst

heaxyle@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | Verona, KY (open to relocation and remote)

Authorized to work in the US, no sponsorship required

PROFILE

Senior QA Analyst with six years of experience testing large-scale, live consumer products at Epic Games (Fortnite) and Ubisoft. Owns features end to end, from test planning and coverage through release testing and post-release monitoring, with hands-on experience in purchase flows, paid content entitlements, and user progression systems. No owned feature shipped with a critical or blocking issue. Led a test sub-team, onboarded roughly 24 testers new to the project, and coordinated external QA teams.

SKILLS

- **Testing:** Functional, Regression, Smoke, Exploratory, Integration, Compatibility, UI, Localization, Performance (frame rate, load times), User Acceptance Testing (UAT), Release and hotfix verification
- **Domain experience:** Monetization and purchase flows (virtual currency spending, paid pass purchases), paid content entitlements, age-rating content restrictions, user progression and rewards, configuration and content data validation, live-service release cycles
- **Documentation & validation:** Test plans, test cases, test evidence, and daily/weekly status reporting; documentation-driven, requirements-based testing suited to regulated validation work
- **Platforms:** Desktop (Windows), mobile (Android, iOS), console (PlayStation, Xbox, Nintendo Switch, on dev kits), cloud streaming
- **Tools:** JIRA, TestRail, QMetry, Confluence, Jenkins, Perforce (P4V)
- **Automation:** Python (PyAutoGUI) UI verification script; record/playback scenario automation run in Jenkins CI
- **Currently learning:** Playwright (Python/pytest), Postman, SQL, GitHub Actions
- **Leadership & Process:** Agile/Scrum, test planning, sub-team leadership, onboarding and mentoring, external QA team coordination, QA status and risk reporting

WORK EXPERIENCE

Senior QA Tester | Epic Games, Cary, NC | Fortnite

Sep 2023 – Aug 2025

- Owned QA for 5–8 features per release season across Fortnite's player progression and monetization features (quests, rewards, and the paid seasonal Battle Pass), including licensed brand partnerships such as Pirates of the Caribbean and Teenage Mutant Ninja Turtles.
- Tested Battle Pass purchase flows (virtual currency spending, purchase completion, ownership verification) and age-rating restrictions on its cosmetic content for younger audiences.
- Built test plans and coverage for each owned feature, verified it integrated cleanly with existing systems and shared data, and flagged quality risks and coverage changes to design and production.
- Every owned feature shipped without a critical or blocking issue; pre-release catches included a defect blocking user progression and one preventing players from accessing licensed partner content.
- Validated configuration and content data in the internal content editor, repeatedly catching data carried over between releases that still referenced items that no longer existed.
- Verified fixes in a pre-production staging environment and monitored owned features through production releases and live events; tested new features in isolated test environments and adjusted configuration values in test environments to create targeted test conditions.
- Briefed external QA teams on expected behavior each release cycle, reducing misfiled defects and clarification requests to developers and designers.

Ubisoft | Anno 1800, strategy title on PC and console

Jun 2019 – May 2023

Development QA, Ubisoft Mainz, Germany

May 2022 – May 2023

Transferred to Mainz to continue on the same product through its console release (PS5, Xbox Series X|S).

- Recorded and configured automated validation scenarios with the studio's record/playback tool for core gameplay flows, such as spending in-game currency on buildings and validating the result, stored in Perforce and run in Jenkins CI; monitored daily pass/fail results, reducing manual smoke testing.
- Continuously updated test suites and wrote new test cases based on test results and coverage gaps, keeping coverage current as features changed.

- Tested assigned areas hands-on, escalating critical and blocking issues ahead of release milestones.
- Monitored frame rate and level load times across PC, PS5, and Xbox Series X|S, flagging frame-rate drops and slow loads for investigation.
- Tracked feature progress in development meetings, relayed changes to external QA teams, and analyzed their results to keep their coverage aligned with current builds.
- Built a Python (PyAutoGUI) script verifying that settings labels and screen resolution changes rendered correctly.

Game Tester (QA/QC), Ubisoft Kyiv, Ukraine

Jun 2019 – May 2022

- Tested the PC version across all areas for three years; caught, before release, a revenue-impacting entitlement defect in multiplayer sessions that gave every participant paid add-on content only one user had purchased.
- Grew from the original four-person PC squad into leading the PS5 sub-team when console development began; as point of contact, onboarded roughly 24 testers joining the console sub-teams (some of them new to QA) and guided them through the project, ramping them up fast enough to keep pace with it.
- Monitored frame rate and level load times on PC and, once console development began, PS5 builds, flagging frame-rate drops and slow loads.
- Assigned daily tasks with the team lead, maintained test plans and test cases, led internal playtest sessions, and reported QA status daily and weekly.

INDEPENDENT PROJECTS

2026 – Present

Code, tools, and translation generated with AI (Claude); my role: direction, review, testing, and release.

Dressmaker (commercial PC game, Steam) – unofficial Ukrainian fan localization | [GitHub](#)

- Directed and tested an AI-generated EN→UA translation of ~6,400 strings (UI, tutorial, items, dialogue, ~550 pattern-piece names), using a terminology glossary and grammatical-gender rules, with placeholders and rich-text tags validated across every string.
- Gathered the evidence (application logs, in-game screenshots) that pinned down why parts of the translation didn't appear: an unreadable re-saved data bundle, an integrity check rejecting modified files, and strings stored outside the localization tables; verified each fix in-game and on the end user's PC.
- Published it as patch scripts only (no game files distributed), with install/uninstall scripts and automatic backups; now running the LQA pass with a native-speaker playtester, using a bilingual bug-report template with category and severity fields.

Drake Arena – real-time web app driven by live Twitch chat events, English/Ukrainian | [GitHub](#) | [Live demo](#)

- Treated it like a production feature: reviewed each build, logging bugs and rule changes (13 in one review round), and requested test coverage for every change.
- That coverage now runs in CI on every pull request: seeded simulations (tens of thousands of runs per build) behind a pass/fail gate, mutation testing that checks the suite catches deliberately injected bugs, and Playwright UI and layout checks in both languages.

QA knowledge assistant – local retrieval (RAG) tool

- Built for a friend's support team, then adapted to QA docs: answers questions from test plans, specs, and past bug reports, citing the source file on every answer (LangChain, ChromaDB, Ollama).

CERTIFICATIONS & TRAINING

ISTQB Certified Tester Foundation Level (CTFL), 2022 | ISTQB Certified Tester Advanced Level, Test Management (CTAL-TM), 2024

Training: AI Fluency: Framework & Foundations; Claude Code 101 — Anthropic Academy, Oct 2026

EDUCATION

Specialist in Finance and Credit, Academy of Labor, Social Relations and Tourism, 2014

LANGUAGES

English (Fluent) | Ukrainian (Native) | Russian (Fluent)
