

MYKOLA MAKHOVYK

Senior QA Tester

heaxyle@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | Verona, KY (open to relocation and remote)

Authorized to work in the US, no sponsorship required

PROFILE

Senior QA Tester with six years of AAA experience at Epic Games and Ubisoft. Owned feature QA for Fortnite's Quests and Battle Pass, including purchase flows and age-rating restrictions; no owned feature released with a critical or blocking issue. Spent four years on Anno 1800, leading a PS5 sub-team and onboarding roughly 24 testers new to the project. Experienced across the live-service cycle: in-engine configuration checks, pre-release hotfix validation, and live update monitoring.

SKILLS

- **Testing:** Functional, Regression, Smoke, Exploratory, Integration/Compatibility, Performance (frame rate, load times), UI, Localization, Playtesting, User Acceptance Testing (UAT), Live-ops and hotfix validation
- **Game systems:** Live-service seasons, Battle Pass and monetization, quests and progression, co-op and multiplayer, IP collaborations, city-builder and strategy economy, EN/UA localization
- **Platforms:** Windows PC, PS4, PS5, Xbox One, Xbox Series X|S, Nintendo Switch, Android, iOS, Amazon Luna (cloud)
- **Hardware:** PlayStation, Xbox, and Nintendo Switch dev kits; Android and iOS test devices
- **Tools:** Unreal Editor, JIRA, TestRail, QMetry, Confluence, Perforce (P4V), Jenkins
- **Automation:** Python (PyAutoGUI) UI verification script; record/playback gameplay automation run in Jenkins CI
- **Currently learning:** Playwright (Python/pytest), Postman, SQL, GitHub Actions
- **Leadership & Process:** Agile/Scrum, test planning, sub-team leadership, onboarding and mentoring, external QA vendor coordination, QA status and risk reporting

WORK EXPERIENCE

Senior QA Tester | Epic Games, Cary, NC

Sep 2023 – Aug 2025

- Owned QA for 5–8 features per season on Fortnite's Quests and Battle Pass team, including IP collaborations such as Pirates of the Caribbean and Teenage Mutant Ninja Turtles.
- Tested Battle Pass purchase flows (V-Bucks spending, purchase completion, ownership verification) and age-rating restrictions on Battle Pass cosmetics for E and E10+ rated experiences.
- Built test plans and coverage for each owned feature, verified it integrated cleanly with existing systems and shared data, and flagged quality risks and coverage changes to design and production.
- Every owned feature shipped without a critical or blocking issue; pre-release catches included a bug blocking Story Quest progression and one preventing players from unlocking collaboration content.
- Reviewed quest configurations directly in Unreal Editor, repeatedly catching cross-season quest data that still referenced the previous season's items before it reached players.
- Validated hotfixes in staging before release and monitored owned features through live updates and events; tested new features in isolation on dedicated test islands and used the live-ops tooling in test environments to adjust values such as spawn weights for targeted test conditions.
- Briefed external QA teams on expected feature behavior each season, reducing misfiled bugs and clarification requests to developers and designers.

Ubisoft | Anno 1800 (PC, PS5, Xbox Series X|S)

Jun 2019 – May 2023

Development QA, Ubisoft Mainz, Germany

May 2022 – May 2023

Transferred to Mainz to continue on Anno 1800 through its console port.

- Recorded and configured automated gameplay-validation scenarios with the studio's record/playback tool, such as spending in-game currency on buildings and validating the result, stored in Perforce and run in Jenkins CI; monitored daily pass/fail results, reducing manual smoke testing.
- Continuously updated test suites and wrote new test cases based on test results and coverage gaps, keeping coverage current as features changed.
- Tested assigned areas hands-on, escalating critical and blocking issues ahead of milestones.
- Monitored frame rate and level load times across PC, PS5, and Xbox Series X|S, flagging FPS drops and slow loads for investigation.

- Tracked feature progress in development meetings, relayed changes to external QA teams, and analyzed their results to keep their coverage aligned with current builds.
- Built a Python (PyAutoGUI) script verifying that settings labels and screen resolution changes rendered correctly.

Game Tester (QA/QC), Ubisoft Kyiv, Ukraine

Jun 2019 – May 2022

- Tested Anno 1800 PC across all game areas for three years, catching a pre-release co-op entitlement bug that let every player in a session receive DLC and paid content only one had purchased.
- Grew from the original four-person PC squad into leading the PS5 sub-team when console development began; as point of contact, onboarded roughly 24 testers joining the console sub-teams (some of them new to QA) and guided them through the project, ramping them up fast enough to keep pace with it.
- Monitored frame rate and level load times on PC and, once console development began, PS5 builds, flagging FPS drops and slow loads.
- Assigned daily tasks with the team lead, maintained test plans and test cases, led playtests, and reported QA status daily and weekly.
- Supported testing and playtests on other Ubisoft titles (Watch Dogs: Legion, Steep, Assassin's Creed Valhalla, Far Cry 6, Rainbow Six Siege); credited on Hyper Scape.

INDEPENDENT PROJECTS

2026 – Present

Code, tools, and translation generated with AI (Claude); my role: direction, review, testing, and release.

Dressmaker (Steam, Unity 6) – unofficial Ukrainian fan localization | [GitHub](#)

- Directed and tested an AI-generated EN→UA translation of ~6,400 strings (UI, tutorial, items, dialogue, ~550 pattern-piece names), using a terminology glossary and grammatical-gender rules, with placeholders and rich-text tags validated across every string.
- Gathered the evidence (Unity player log, in-game screenshots) that pinned down why parts of the translation didn't appear: an unreadable re-saved bundle, a catalog integrity check, and strings stored outside the localization tables; verified each fix in-game and on the end user's PC.
- Published it as patch scripts only (no game files distributed), with install/uninstall scripts and automatic backups; now running the LQA pass with a native-speaker playtester, using a bilingual bug-report template with category and severity fields.

Drake Arena – Twitch-chat auto-battler overlay, English/Ukrainian | [GitHub](#) | [Live demo](#)

- Treated it like a production feature: reviewed each build, logging bugs and rule changes (13 in one review round), and requested test coverage for every change.
- That coverage now runs in CI on every pull request: seeded balance simulations (tens of thousands of fights per run) behind a win-rate gate, mutation testing that checks the suite catches deliberately injected bugs, and Playwright UI and layout checks in both languages.

CERTIFICATIONS & TRAINING

ISTQB Certified Tester Foundation Level (CTFL), 2022 | ISTQB Certified Tester Advanced Level, Test Management (CTAL-TM), 2024

Training: AI Fluency: Framework & Foundations; Claude Code 101 — Anthropic Academy, Oct 2026

EDUCATION

Specialist in Finance and Credit, Academy of Labor, Social Relations and Tourism, 2014

LANGUAGES

English (Fluent) | Ukrainian (Native) | Russian (Fluent)
