

MYKOLA MAKHOVYK

Senior QA Tester

heaxy@gmail.com | [Linkedin](#) | Verona, KY (open to relocation and remote)

Authorized to work in the US, no sponsorship required

PROFILE

Senior QA Tester with six years of AAA experience at Epic Games and Ubisoft. Owned feature QA for Fortnite's Quests and Battle Pass and shipped every owned feature without a critical or blocking issue. Spent four years on Anno 1800, leading a PS5 sub-team and onboarding roughly 24 new testers. Experienced across the full live-service cycle: in-engine configuration checks, pre-release hotfix validation, and live update monitoring.

SKILLS

- **Testing:** Functional, Regression, Smoke, Integration/Compatibility, Performance, UI/UX, Localization, User Acceptance Testing (UAT), Live-ops and hotfix validation
- **Platforms:** Windows PC, PS4, PS5, Xbox One, Xbox Series X|S, Nintendo Switch, Android, iOS, Amazon Luna (cloud)
- **Hardware:** PlayStation, Xbox, and Nintendo Switch dev kits; Android and iOS test devices
- **Tools:** Unreal Engine/Editor, JIRA, TestRail, QMetry, Confluence, Perforce (P4V), Jenkins
- **Automation:** Python (PyAutoGUI) UI verification script; record/playback gameplay automation run in Jenkins CI
- **Leadership & Process:** Agile/Scrum, sub-team leadership, onboarding and mentoring, external QA vendor coordination, QA status and risk reporting

WORK EXPERIENCE

Senior QA Tester | Epic Games, Cary, NC

Sep 2023 – Aug 2025

- Owned QA for 5–8 features per season on Fortnite's Quests and Battle Pass team, including IP collaborations such as Pirates of the Caribbean and Teenage Mutant Ninja Turtles.
- Tested Battle Pass purchase flows end to end (V-Bucks spending, purchase completion, ownership verification) and age-rating restrictions on Battle Pass cosmetics for E and E10+ rated experiences.
- Built test plans and coverage from scratch, verified each feature integrated cleanly with existing systems and shared data, and flagged quality risks and coverage changes to design and production.
- Shipped every owned feature without a critical or blocking issue, catching pre-release bugs that blocked Story Quest progression and prevented players from unlocking collaboration content.
- Reviewed quest configurations directly in Unreal Editor, repeatedly catching cross-season quest data that still referenced the previous season's items before it reached players.
- Validated hotfixes in the staging environment before release, tested new features in isolation on dedicated test islands, and used Unreal's live-ops tooling to adjust values such as spawn weights to create targeted test conditions.
- Briefed external QA teams on expected feature behavior each season, reducing misfiled bugs and clarification requests to developers and designers.
- Monitored owned features during live updates and events, confirming clean deployment and standing by to validate hotfixes if issues surfaced.

Ubisoft | Anno 1800 (PC, PS5, Xbox Series X|S)

Jun 2019 – May 2023

Development QA, Ubisoft Mainz, Germany

May 2022 – May 2023

Transferred to Mainz to continue on Anno 1800 through its console port.

- Recorded and configured automated gameplay-validation scenarios, stored in Perforce and run in Jenkins CI; monitored daily pass/fail results, reducing manual smoke and regression testing.
- Continuously updated test suites and wrote new test cases based on test results and coverage gaps, keeping coverage current instead of spending effort on outdated cases.
- Tested assigned areas hands-on, escalating critical and blocking issues ahead of milestones.
- Tracked feature progress in development meetings, relayed changes to external QA teams, and analyzed their results to keep their coverage aligned with current builds.
- Built a Python (PyAutoGUI) script verifying that settings labels and screen resolution changes rendered correctly.

- Tested Anno 1800 PC across all game areas for three years, catching a pre-release co-op entitlement bug that let every player in a session receive DLC and paid content only one had purchased.
- Built and maintained test plans and test cases, and helped junior and mid-level testers cover their assigned areas.
- Grew from the original four-person PC squad into leading the PS5 sub-team when console development began; onboarded and trained roughly 24 new testers, ramping them up fast enough to keep pace with the project.
- Assigned daily tasks with the team lead, led playtests, and reported QA status daily and weekly.
- Supported testing and playtests on other Ubisoft titles (Watch Dogs: Legion, Steep, Assassin's Creed Valhalla, Far Cry 6, Rainbow Six Siege); credited on Hyper Scape.

INDEPENDENT PROJECTS | AUG 2025 – PRESENT

Drake Arena – Twitch-chat auto-battler overlay, English/Ukrainian | [GitHub](#) | [Live demo](#)

- Directed the AI-assisted build and ran it like a production feature: reviewed each build, logging bugs and rule changes (13 in one review round), and requested test coverage for every change.
- That coverage now runs in CI on every pull request: seeded balance simulations (~24,000 fights per run) behind a win-rate gate, mutation testing that proves the suite catches injected bugs, and Playwright UI and layout checks in both languages.

Dressmaker (Steam, Unity) – Ukrainian localization

- Directed an AI-assisted translation of ~5,800 strings (UI, tutorial, items, dialogue) with a terminology glossary and grammatical-gender rules, validated placeholders and rich-text tags, tracked down strings stored outside the localization tables, and ran in-game LQA on two PCs with documented known issues.

QA knowledge assistant – local RAG tool

- Directed the AI-assisted build of a tool that answers questions from test plans, specs, and past bug reports, citing the source file on every answer (LangChain, ChromaDB, Ollama).
